

TRANSCRIPT PREPARED BY THE CLERK OF THE LEGISLATURE
Transcriber's Office
FLOOR DEBATE

February 11, 2004 LB 559

didn't agree necessarily with them, because I don't believe that it was designed to stop identity theft. But my point is, is that the whole bill, we've been told, is to stop this identity theft in one fashion or another, and what we're allowing the department to do is send information contained on a driver's license--actually we're not allowing them to do that, we're telling them to do that, to transfer that...all that information on the front of a driver's license electronically to another source, which, as you can see, in my mind, at least, I'm struggling to see how these fit together. You know, Senator Baker brought the bill saying it's an identity theft stopper, and yet your bill allows us to...or requires the DMV to transfer information. Could you comment, please?

SENATOR CUDABACK: Senator Thompson.

SENATOR THOMPSON: Yes. The...I recognize that. And it was brought to our attention in the hearing by the Department of Motor Vehicles. However, one of the things that we do have set up is this group of people, the advisory board, who will develop protocols and processes and procedures. There wasn't a way to get to it in the bill at this stage. But it's the belief--and that's why the department came in in support of the bill--that we would be able to put in place those processes and protocols for that information sharing that would secure that. And also, the organ donor group that...or the organ procurement group, is similar to those entities that have been designated in many states around the country that are also doing this, that there will be some history and some ability to get that...assure that privacy through this process. So we recognize that, but really believe the best way to address that, and...

SENATOR BOURNE: So...

SENATOR THOMPSON: ...DMV does, is through this...setting up the process.

SENATOR BOURNE: So the advisory committee...it's your intent that the advisory committee will work with DMV to somehow...while requiring DMV to transfer this information, will come up with guidelines to make sure that it's a secure
